Reflective Vehicle Graphic

Tritech Sdn. Bhd. can help you create awareness by using reflective vehicle graphics. For conspicuity, recognition and safety, we use ORALITE® brand which offer the most effective high visibility materials on the market today and offer a full range of single layer microprismatic films designed for vehicle livery. The microprismatic films provide the best visibility in daytime, poor light and adverse weather conditions. Furthermore, it is highly visible at night from more than 500 meters away and greatly increase visibility up to 9 times brighter during bad conditions such as rain and fog.

ORALITE® Daybright™ is the preferred choice by most fleets when it comes to conspicuity markings, due to the product construction which is just simply ideal for this application. The film conforms easily around contours of vehicle allowing greater vehicle coverage thus enhanced conspicuity and safety. The vehicle can be power washed and any impact damage will not reduce the photometrics of the film ensuring day and night visibility.
