

IMPROVING VISIBILITY

IMPROVING SAFETY

Accidents and crashes often occurs because of poor visibility which leads to fatalities, severe injuries, and property loss. This can be prevented when the visibility of people, objects, and hazards are improved.

Simple products can be highly useful for your safety. For people, it is recommended to wear high visibility clothings. For vehicles, visibility can be improved by adding MS828 reflective sheeting. Cones, delineators, warning triangle, signages etc should also be added with reflective sheeting to improve its visibility.

Tritech's safety products feature bright fluorescent colours to help improve daytime visibility and highly reflective sheeting to improve nighttime visibility. It is critical that all road safety products, meet safety standards and equipped with high quality reflectors that enhance visibility in daytime, nighttime and rainy days.

Tritech mission is to improve the visibility of people and objects, thereby improving road safety and saving lives. We develop road safety products that comply with Malaysian and international standards and also meet the requirements of JPJ, DOSH, JKR, LLM and other local authorities.

MS 828 reflective sheeting installed onto heavy vehicle as contour marking

Traffic management products with bright fluorescent colour gives daytime visibility.

Reboundable poles in bright fluorescent colour for daytime visibility and fixed with reflective sheeting for nighttime visibility.

High visibility rainsuit with reflective tape for personal safety.
